Letter of Explanation to IRCC

- **Applicants:** Olavo Pereira de Mello Neto and Priscila Luz e Calil
- **Business Name:** Bringfy Delivery Incorporated
- **Designated Organization:** Brilliant Catalyst – Ontario Tech University

This letter is respectfully submitted in support of our Startup Visa Permanent Residence application. Its purpose is to provide updated information and clarifications following the most recent GCMS notes, addressing the officer's observations.

Through this document, we aim to reaffirm the viability and potential of Bringfy Delivery Incorporated, our ongoing commitment to business development in Canada, and our family's long-term integration and settlement. Each section below responds directly to the key areas raised in our file, supported by factual evidence, operational progress, and verified business achievements since our initial submission.

1. Business viability and contribution to the Canadian market

Bringfy Delivery Incorporated is a technology-driven logistics company focused on last-mile, same-day, and next-day deliveries, connecting individuals and businesses with professional drivers through an integrated platform.

Our vision aligns directly with Canada's innovation and digital transformation goals by addressing a critical logistics gap faced by retailers, e-commerce, and small businesses—creating jobs, reducing delivery costs, and improving supply-chain efficiency.

Bringfy's system architecture was designed to scale nationally, with modular features that integrate dispatch, route optimization, and live-tracking in a single platform. The company builds on validated market data, partnerships, and ongoing engagement with the Ontario innovation ecosystem, contributing to local economic growth and sustainability.

2. Incubation program success and ongoing relationship with Brilliant Catalyst

Bringfy successfully completed its incubation under Brilliant Catalyst at Ontario Tech University, fully engaging in every required phase—mentorship sessions, business development workshops, pitch presentations, and milestone reviews.

Our team demonstrated measurable progress during the program, receiving strong feedback and support from mentors and advisors. The incubation experience not only refined our business model and go-to-market strategy but also reinforced our long-term relationship with the incubator, which continues to provide guidance and ecosystem connections even after formal completion.

We also addressed the concern noted in our latest ATIP regarding the business and designated organization being registered in different provinces. At the time of PR submission, British Columbia was the only province that allowed incorporation by non-permanent residents, which made it

necessary to establish Bringfy there initially. Once our relocation to Ontario became possible, we legally and strategically transitioned the company to Ontario, where it remains active today.

We remain actively involved in Ontario's startup ecosystem, representing the success and integrity of the Brilliant Catalyst program while contributing to Canada's innovation agenda. Additionally, we have been in contact with other regional innovation hubs such as Communitech, exploring opportunities for mentorship, networking, and collaboration to adapt Bringfy to the Canadian market. We also already talked with Angela Bruce to understand how to become a Communitech member, recognizing how essential the tech community in the Waterloo Region is for the growth and integration of innovative startups like Bringfy.

Throughout the incubation process, Brilliant Catalyst conducted continuous due diligence on Bringfy's business model, market strategy, and operational readiness. This included milestone reviews, financial evaluations, and pitch assessments that validated our eligibility for the Startup Visa Program. These evaluations, together with our program completion records, mentor feedback, and the new support letter from Brilliant Catalyst, demonstrate that Bringfy successfully met all requirements established by the Designated Organization.

3. Clarification of shareholder roles and Leadership Capacity

During the eligibility review, officers expressed concern about the effect of Mr. Polaco's departure on Bringfy's management and viability.

We respectfully clarify that Mr. Fransergio Polaco stepped away from the company for personal reasons early in the development phase. His functions—primarily related to driver coordination and early logistics outreach—were immediately reassigned to Mr. Vinicius Medeiros Chaves, ensuring no interruption to operations or project execution.

Mr. Chaves is a co-founder with extensive experience in fleet management, logistics, and financial administration, gained through his own company, Probase, which provides vehicle-tracking and management solutions. His technical and administrative background has strengthened Bringfy's operational foundation and reinforced financial governance within the organization.

Both Mr. Olavo Pereira de Mello Neto and Mr. Vinicius Medeiros Chaves are seasoned entrepreneurs with a long-standing partnership. Together, they have founded and managed several successful ventures in Brazil—businesses that remain active and profitable. Their proven ability to lead, innovate, and adapt demonstrates exactly what the Startup Visa Program is designed to attract: real entrepreneurs with a history of business creation, innovation, and job generation.

The transition of roles following Mr. Polaco's departure was handled swiftly and effectively, ensuring business continuity and compliance with the structure approved in the Commitment Certificate. This stability within the management team confirms Bringfy's capacity to operate successfully and fulfill its commitments to the Canadian market.

4. Strategic Role of Priscila Luz e Calil, Chief Operating Officer (COO)

Ms. Priscila Luz e Calil holds a pivotal and essential leadership role in Bringfy's strategic development. Crucially, her function is focused on building the internal operational framework necessary for high-growth, compliant, and sustainable scalability in the Canadian market. Her core expertise lies in establishing robust corporate governance, process excellence, and rigorous regulatory compliance.

This expertise is proven by her background in operational governance, large-scale process optimization, and strategic planning within highly regulated environments, including a key role in quality assurance at two of Brazil's largest infrastructure groups of concessionaire (Public-Private Partnership): Arteris and Entrevias (controlled by Vinci Highways), part of one of the world's largest road operators. She served as Internal Auditor for ISO 9001, 14001, 39001, and 45001, directly ensuring the implementation of international protocols for Quality, Road Traffic Safety, and Occupational Health across thousands of kilometers of operations.

Ms. Calil gained essential expertise in designing, implementing, and auditing management systems that meet global benchmarks for compliance and safety. This unique corporate expertise is foundational to Bringfy's ability to achieve operational maturity and strategic growth in Canada, where high standards of quality, safety, and labor compliance are mandatory for market entry and expansion.

At Bringfy, as the COO, she applies this high-level expertise to design and implement all internal control procedures, ensuring stringent compliance with Canadian transportation and labor regulations and guiding the company's expansion strategy responsibly and sustainably. Her leadership ensures that Bringfy is not merely a delivery service but a corporation built with the same operational excellence and regulatory rigor that characterize the leading global companies she once represented. Ms. Calil's essential contribution—the immediate establishment of an auditable, high-compliance operating framework—reflects the unique, high-level expertise required for innovation-driven, inclusive economic development under Canada's vision.

5. Commitment, integration, and family dedication in Canada

Mr. Olavo Pereira de Mello Neto relocated to Canada with his family, fully investing his time, financial resources, and expertise to build Bringfy. A Postgraduate Software Engineer with over 25 years of IT and entrepreneurial experience, he has applied his technical skills to integrate Bringfy's Canadian infrastructure with the successful Brazilian platform e-Carreto, forming a seamless cross-border ecosystem that positions Bringfy for international growth.

His spouse, Ms. Sandra Peres Caram Pereira de Mello, closed her own business in Brazil to relocate to Canada and support this endeavor, demonstrating extraordinary commitment and family alignment with the Startup Visa's objectives. Their daughter, Isabela Mello, postponed her high-school graduation in Brazil to continue her education in Canada, pursuing her aspiration to become a nurse and eventually a physician.

Their oldest son, Guilherme Caram Pereira de Mello, remained in Brazil for almost three years, away from his family, to complete his university degree. Now post-graduated as a Personal Trainer, he is preparing to join his family in Canada to contribute to the community and pursue his own entrepreneurial path. Guilherme aims to open his first business in Canada, applying his knowledge and passion for health and wellness in a country that shares his values and mindset about life, balance, and well-being.

Our most recent ATIP (Access to Information and Privacy) notes indicated concerns about our financial situation in Brazil. To clarify and demonstrate our continued commitment and transparency, we have already transferred part of our personal and business investment funds from Brazil to Canada, which are now available in Mr. Olavo's personal CIBC account. These resources are fully accessible for family settlement and for supporting Bringfy's operational development in Canada, reinforcing both our financial stability and our dedication to contributing to the Canadian economy.

Ms. Priscila Luz e Calil is also fully dedicated to the success of Bringfy and its establishment in Canada. Her daughter, Clara, currently included in the Permanent Residence application as a dependent, is a high-achieving student in Civil Engineering at a highly respected Federal Public University in Brazil. Her academic path is in a highly sought-after technical field in Canada. Upon the family's immigration, Clara intends to pursue post-graduate studies in Canada or transfer her degree to continue her education in a Canadian institution.

This family's collective resilience, sacrifice, and long-term vision demonstrate their full integration into Canadian society and their desire to contribute meaningfully to the country's economic and social development.

6. Proven experience through e-Carreto in Brazil

Bringfy leverages the strong foundation of e-Carreto, a well-established logistics startup in Brazil that grew under two major incubators linked to the University of São Paulo (USP):

- SUPERA Innovation and Technology Park
- DABI Business Park

Through these programs, the founders gained extensive experience in developing scalable logistics solutions, managing teams, and navigating innovation ecosystems. This proven success story strengthens Bringfy's credibility and ensures its operational and strategic maturity in Canada.

The potential of e-Carreto and Bringfy was recognized early by major technology corporations such as Amazon and Microsoft, which both granted infrastructure sponsorships and accepted the company into their respective Startup Programs during its first two years of operation. This validation from global leaders highlights the technological and commercial strength behind Bringfy's foundation.

7. Market opportunity, competitiveness, local engagement, and social impact

The Canadian last-mile delivery sector is growing exponentially, driven by e-commerce and service-based logistics. Companies such as GoBolt—founded by University of Toronto graduates—demonstrate the country's capacity to foster world-class logistics startups.

However, the sector remains largely dominated by international giants such as Amazon and Walmart, which limits flexibility and pricing power for Canadian retailers and small businesses. Bringfy introduces a Canadian-built, innovation-driven alternative that empowers local merchants and consumers, increases competition, and strengthens domestic logistics infrastructure. By enabling fairer access to technology and delivery networks, Bringfy contributes directly to making the Canadian market more competitive, resilient, and less dependent on foreign monopolies—supporting Canada's broader economic independence and small-business growth.

We have also invested in professional consulting and advisory services to ensure our business is aligned with Canadian market standards. Through IPMA Consulting, the international consultant Hayrne Salvanha has reviewed our Business Plan, conducted market research, refined the connection between our companies, and provided strategic guidance to build a solid and sustainable pathway in Canada.

We are also including the Project Management Consulting Letter issued by IPMA Consulting, which attests to the depth of this professional engagement and confirms that Bringfy's business strategy,

operational plan, and execution framework meet Canadian project management, innovation, and market adaptation standards.

We collaborated with Innova Consulting, which conducted an independent evaluation of Bringfy's business model, founding team, and market-entry strategy. Their professional assessment confirmed that Bringfy is a credible, innovation-driven company with strong potential for growth and scalability within Canada's last-mile logistics sector, as outlined in the Letter of Business Validation provided by Innova.

We have been engaging with potential delivery drivers to refine Bringfy's platform and make it more attractive compared to popular delivery networks such as Uber, Instacart, and DoorDash. Drawing on our previous experience in Brazil, we are adapting proven driver-retention and incentive strategies that successfully built loyalty and operational reliability there, now applying them in Canada to attract skilled and experienced drivers.

Bringfy already operates with beta testers and maintains active relationships with local small and medium-sized businesses, including JJ's Convenience, which operates multiple stores across Waterloo, London, Milton, Mississauga, Oakville, Guelph, Hamilton, Burlington, Paris, Brantford, Woodstock, Ingersoll, and Stratford. One of the owners, Caio, is seeking solutions to integrate and improve the stores' delivery operations. Together, these businesses are exploring delivery improvements through Bringfy to enhance competitiveness and customer experience.

We are also creating employment opportunities in Canada, supporting professionals who contribute to our growth and community integration. One of them is Caroline, our Marketing Specialist, who has played a crucial role in expanding Bringfy's presence and influence. Through her creativity, market insight, and strategic approach, Caroline has strengthened our brand identity, community engagement, and local partnerships, helping Bringfy grow its reputation and network across the Waterloo Region and beyond.

In addition to its commercial goals, Bringfy is developing community-centered projects designed to create a positive social impact. One of these initiatives aims to support local communities by connecting individuals, charities, and organizations that wish to donate essential goods with recipients who need them most. By leveraging Bringfy's logistics infrastructure, this program helps ensure that donated food, clothing, and resources are delivered quickly, safely, and efficiently to those in need. This initiative reflects Bringfy's commitment to corporate social responsibility and its mission to make technology serve both business and humanitarian purposes.

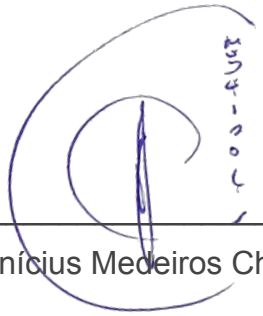

These partnerships, employment opportunities, and initiatives demonstrate tangible market traction, strong community engagement, and a deep commitment to Canada's social and economic ecosystem. Bringfy's scalable model, rooted in innovation, inclusivity, and local collaboration, helps ensure that Canadian entrepreneurship and logistics capacity grow together, generating jobs, fostering regional development, and reinforcing the national innovation economy.

8. Startup nature, resilience, and the impact of delays

Startups thrive on agility, innovation, and rapid execution. In this environment, every month of delay in permanent residence processing directly impacts business development, hiring, and investor confidence. Despite these challenges, we have continued investing our own time, energy, and financial resources, operating with integrity and full commitment to the success of both Bringfy and Canada's Startup Visa Program.

We respectfully request that IRCC recognize our continued compliance, demonstrated dedication, and proven potential to contribute to Canada’s economy through innovation, job creation, and sustainable growth.

Respectfully submitted,

Vinícius Medeiros Chaves - CEO

Olavo Pereira de Mello Neto - CTO

Priscila Luz e Calil - COO
