Letter of Business Validation

Date: Oct 27, 2025
Subject: Business Validation – Bringfy Inc.

To Whom It May Concern,

Bringfy Inc. engaged **Innova in Canada Corporation** for business advisory services under the Startup Visa preparation framework. The engagement involved strategic and technical evaluation of the company's business model, founding team, and market entry strategy in Canada, to assess viability and innovation potential within the national ecosystem.

During that period, Innova conducted a comprehensive assessment of the company's business model, founding team, and strategy for entering the Canadian market. The project presented a strong and scalable concept in the last-mile logistics technology sector, designed to serve small and medium-sized enterprises through a white-label, data-driven platform integrating both B2B and B2C operations.

The advisory work included analysis of market size and regional opportunities across Ontario and the Durham Region, with particular attention to small and medium businesses seeking accessible and cost-efficient delivery solutions. The founding team demonstrated clear awareness of the local logistics ecosystem, identifying practical entry points through institutional partnerships, pilot testing, and participation in innovation programs.

The business plan also incorporated a structured understanding of the competitive landscape. Bringfy positioned itself among existing logistics solutions in Canada—such as Tyltgo, GoBolt, and ShipBob—while defining its differentiation through modular technology and the ability for clients to operate with their own fleets, an advantage that aligns with Canada's demand for flexible last-mile services.

In terms of establishment strategy, the founders followed a gradual and well-defined approach. Their plan involved Canadian incorporation, structured business advisory with Innova, and subsequent participation in **Brilliant Catalyst**, a designated organization under the Startup Visa Program operating through the **Office of the Vice-President, Research and Innovation at Ontario Tech University**. This incubation

provided continuity to the groundwork completed during Innova's advisory phase and offered the founders access to mentorship, commercialization resources, and university-linked networks. The company then advanced through incremental market validation with beta clients and collaborative initiatives involving post-secondary institutions, alongside partnerships with **SELC College**, **Communitech**, and technology sponsors such as **Microsoft for Startups** and **AWS Activate**—demonstrating its ability to execute this roadmap and integrate effectively into Canada's innovation ecosystem.

Regarding team composition, the original structure validated by Innova included complementary expertise across logistics, technology, and operations. The company has since maintained the core leadership and technical capacity needed to continue product development, market testing, and partnership building in Canada.

Beyond its commercial goals, Bringfy also reflects a socially responsible approach through initiatives such as **Donations Deliveries**, which leverages its platform to connect donors and recipients, promoting sustainable logistics and community engagement. This balance between economic scalability and social impact aligns with the broader purpose of fostering innovative and beneficial ventures within Canada.

While Innova's formal advisory engagement concluded in 2023, our professional view remains that **Bringfy Inc. demonstrates a credible business foundation, market awareness, and ongoing progress consistent with the objectives of the Canadian innovation and entrepreneurship ecosystem.**
