Olavo Mello

Senior Full-Stack Engineer & AI Engineer | AI Native Builder & LLM Integration

Kitchener-Waterloo, ON, Canada | olavopmn@gmail.com | linkedin.com/in/olavo-mello | github.com/olavomello

SUMMARY

Senior Full-Stack Engineer and AI Engineer who has shipped production platforms serving 85,000+ users and 28,000+ drivers. At e-Carreto, took a logistics marketplace from zero to production in 6 months with a 3-engineer team and 30+ integrated services. Built Fotic to 3,500+ photographers and 20,500+ processed orders, and a custom CMS/e-commerce platform that still runs 1,000+ client sites across Brazil. 20+ years owning architecture, delivery, and infrastructure end-to-end (frontend, backend, database, cloud), with hands-on production experience integrating OpenAI, Claude, Gemini, and Copilot into user-facing workflows. Equally comfortable defining architecture and writing production code.

EXPERIENCE

e-Carreto (Brazil) · Bringfy (Canada) – CTO / Lead Engineer – Ribeirao Preto, Brazil & Kitchener, Canada

Jan 2021 – Present

- Built, scaled, and operated a logistics platform and driver marketplace serving 85,000+ users and 28,000+ registered drivers across Brazil.
- Shipped an API-first logistics platform in 6 months with driver matching, route calculation, and dynamic pricing services, using TypeScript, Node.js, Express, React, Next.js, React Native, and MySQL.
- Architected a shared backend that supports multiple market deployments without duplicating core logistics services.
- Led the platform's Canadian deployment as Bringfy (Ontario) since 2022, adapting it through localization, regional integrations, and market-specific delivery workflows with zero unplanned downtime since launch.
- Integrated 30+ third-party services, including Google Maps Platform, Buonny (transport risk management), and FIPE (vehicle valuation), automating route optimization, driver verification, and business workflows.
- Built and mentored a 3-engineer team; set code review standards, CI/CD pipelines, and engineering practices.
- Operated Docker/Linux infrastructure on DigitalOcean at 99.9%+ uptime with continuous delivery across market deployments.
- Apply AI-assisted engineering (SDD, AGENTS.md, guardrails) to speed up development, documentation, and testing.

Probase (Fleet Telematics) – CTO / Lead Engineer – Ribeirao Preto, Brazil

Aug 2018 – Jun 2022

- Led engineering for a vehicle tracking and fleet telematics platform processing real-time GPS telemetry from 2,000+ connected devices.
- Built a high-frequency ingestion pipeline handling tens of thousands of daily telemetry requests, with each tracker sending multiple data points per minute.
- Integrated with one of the world's largest vehicle tracking systems and Brazil's five major carriers (Vivo, TIM, Oi, Claro, Nextel) for nationwide M2M connectivity.
- Designed the backend and database layer for continuous, low-latency data collection, plus real-time fleet dashboards and reporting for logistics operators.

Agência Dix – Lead Engineer / Technical Partner – Ribeirao Preto, Brazil

Aug 2003 – Jan 2022

- Built and operated a custom CMS, e-commerce, and marketplace platform serving 1,000+ clients in Brazil and abroad, with hundreds of live production sites.
- Architected the REST API and microservices layer, integrating payment gateways, Google APIs, and Correios (Brazilian postal service).
- Designed and ran dedicated Linux infrastructure: Proxmox virtualization, MySQL database servers, DNS, and mail.
- Built a proprietary framework deployed across every site on the platform and led a distributed engineering team.

DeliveryIt – Lead Engineer / Product Owner – Ribeirao Preto, Brazil

Jul 2019 – Jul 2020

- Built a white-label ordering and delivery platform for restaurants and retailers: a Node.js/PHP REST API documented with APIdoc and a merchant-customizable PWA.

- Designed the multi-tenant data model and integrated Google Maps Platform, Correios, and payment gateways (CIELO, PagSeguro, PayPal).

Fotic (SaaS) – Lead Engineer / Product Owner – Ribeirao Preto, Brazil
Jul 2017 – Apr 2019

- Built and scaled a SaaS platform for professional photographers to 3,500+ photographers, 15,000+ photo albums, and 20,500+ processed orders, as sole engineer from zero to production.
- Built order management, payment processing, and REST/SOAP integrations, on Linux cloud infrastructure sized for high traffic and large media storage.

Tecfad Educacional – Technical Lead – Ribeirao Preto, Brazil
Feb 2002 – Jun 2008

- Led a team of developers, designers, and illustrators building an e-learning platform later adopted by universities, public institutions, and large corporations.
- Built the online classroom and admin tools for institutions, courses, instructors, students, and certification, and owned the release cycle.

Photobusiness – Software Engineer – Ribeirao Preto, Brazil
Feb 2002 – Dec 2004

- Built the core product for a photography company that reached thousands of users and was later acquired: a licensed desktop app with an offline-first architecture syncing to a PHP/MySQL web service.

SKILLS

Languages: TypeScript, JavaScript (ES2022+), Node.js, Python, HTML5, CSS3
Frontend: React, React Native, Next.js, Tailwind CSS, Bootstrap
Backend: Node.js, Express, REST APIs, Webhooks, API-first Architecture, Microservices
Databases: MySQL, PostgreSQL, MongoDB
Infra: Docker, Linux, DigitalOcean, AWS, GCP, Proxmox, CI/CD, Git
AI / LLM: OpenAI API, Anthropic Claude, Gemini, Copilot, Claude Code (hooks, subagents, skills), MCP, AI Agents & Multi-agent Orchestration, RAG, Prompt Engineering, Guardrails, SDD / AGENTS.md
Process: Agile/Scrum, Technical Leadership, System Design, API Design, OKRs/KPIs

EDUCATION

Master of Software Engineering — Unifatecie University | Parana, Brazil
Startup Incubation Program — Ontario Tech University | Ontario, Canada
Bachelor of Computer Science — Centro Universitario Barao de Maua | Sao Paulo, Brazil

RECENT PROJECTS

CareerPilot AI

- AI career copilot built on the Anthropic Claude API with RAG and agent orchestration, using a BYOK (bring-your-own-key) architecture that calls the API directly from the browser.

BikeTalkie

- Android app for offline group voice chat between nearby phones, aimed at cyclists, scooter riders, and runners; built in native Kotlin on Google Nearby Connections with Bluetooth headset audio.

Open-source Deno framework

- Web framework built on Deno and published as open source.
