1.0 Executive Summary

1.1 History

In a daily conversation, the difficulty of getting fast transport services with quality and compatible values that meet the needs of small and medium-sized companies was identified. That's when Vinicius Medeiros, an expert in georeferencing, started looking for a logistics professional in the market to understand the applicability of a certain tool he had imagined. Then he met Fransergio Polaco, who started an in-depth analysis for a solution. The next step was to meet with Olavo Mello, an IT specialist, to identify the possibility of developing a system that would meet the needs presented in a practical, objective, and scalable way. To compose the needs of the project, they looked for a professional who specialized in transport infrastructure, Priscila Calil. From there, they started the process of structuring the business plan and the evaluation of the prerequisites for it to become, in the future, a global company. Born a high-tech logistic company called e-Carreto and lately Bringfy.

1.2 Company in Brazil

Called e-Carreto (ecarreto.com.br), the company in Brazil, focused on B2C (business to customers), received its first investment and was created in January 2021 and launched one year later. Achieving an impressive number of +10k orders, +4k users, and +1k drivers in 5 months, we are changing the logistic sector, the way people ask for delivery

of their products and documents, and also helping the environment sustainability by improving donations, and reducing the carbon footprint through innovation and technology.

1.3 Structure

Vinicius Medeiros as CEO and CFO, Olavo Mello as CTO, and Priscila Calil as COO will lead the company with the support of specific functions such as Accounts Receivable, Accounts Payable, Full Stack Developer, Frontend Developer, Backend Developer, UX Designer, Training, QA, Support Analyst and Salesperson.

1.4 Partners Background

	**Vinicius Medeiros - CEO / CFO** Entrepreneur, specializing in Sales, Management, and Satellite Tracking Has been operating for over 12 years in the segment of vehicle tracking and management and satellite cargo. LinkedIn
	**Priscila Calil - COO** Over 12 years of relevant professional experience in transport infrastructure and operations. Heavy construction estimator, and project manager for road infrastructure. LinkedIn

Olavo Mello - CTO

Entrepreneur since 20 years old, Senior full-stack developer, and Digital marketing specialist.

Over 26 years working with project management, development, startups, and digital marketing.

LinkedIn

1.5 Target Market

Focus on reaching small to midsize local business owners who are looking for fast and better ways to deliver their products. We consider couriers as customers, so we intend to create a relationship with our driver/courier partners. The approach is based on asking questions and prioritizing listening over talking. This strategy will allow us to find the customers' pain points and learn their specific challenges and company goals, in order to find where our services fit in.

1.6 Objectives

Bringfy is committed to reshaping the landscape of last-mile logistics, with a specific focus on instilling competitiveness across businesses of all sizes. Through our innovative digital platform, we aim to empower companies, regardless of their scale, by providing cost-effective, streamlined, and technologically advanced last-mile delivery solutions. Our objective is to be the catalyst that brings competitiveness to every business, ensuring they can thrive in the dynamic global logistics market.

1.7 Lean Canvas

Problem

Can not offer delivery service either with its own or outsourced fleet.

Have not enough technology to manage product's delivery.

Unable to deliver products in a competitive time.

Existing Alternatives

We did not identify competitors offering the same solution.

Solution

Create a digital platform that connects users and carriers and allows the fleet's management and deliveries requests.

Optimize the delivery time offering competitiveness by managing the driver's geolocation and capacity.

Key Metrics

2.0 MVV

2.1 Mission

Our mission is to be the main channel between sellers and carriers, developing a practical and simple user journey, making it possible to request transport, through quick steps, and offering the opportunity to carriers to improve their incomes enjoy their jobs, and spend more time with their family.

2.2 Vision

Empowering businesses of all sizes to thrive in the global marketplace, Bringfy envisions a world where cutting-edge technology transforms last-mile logistics. We believe that by revolutionizing the way products are delivered, our digital platform will not only enhance efficiency and sustainability but also bring newfound competitiveness to businesses worldwide. Our vision is to be at the forefront of this transformative journey, redefining the last-mile logistics landscape for the benefit of our clients and the global economy.

2.3 Values

Reliability, Self-awareness, and Partnership.

3.0 Services

We are a Logitech that not only seeks to optimize processes but also to bring efficiency to existing processes. We have in our DNA the use of technology to expand access to nice-touch professional logistics.

Among the services we provide are:

- Process automation for managing and contracting transport services;
- Management and use of the idle fleet of third-party carriers and/or own fleet;
- Cloud logistics management platform; Cloud;
- Cross-platform transporter application;
- Automated real-time management (FIFO) of fleet load capacity;
- Route control, traffic, vehicles and estimated delivery time;
- Exclusive communication channel between the company and the carrier;

5.0 Customer Segments

With a structure focused on B2B (business to business), we defined two personas to which we will direct our efforts to reach.

5.1 Persona 1 - Customers

- Small and Medium-sized companies.

5.2 Persona 2 - Drivers

- Professional drivers.
- Anyone who is looking for an extra amount.

5.3 - Early Adopters

- Small and Medium-sized companies.
- Professional drivers.

6.0 Personas and Empathy Map

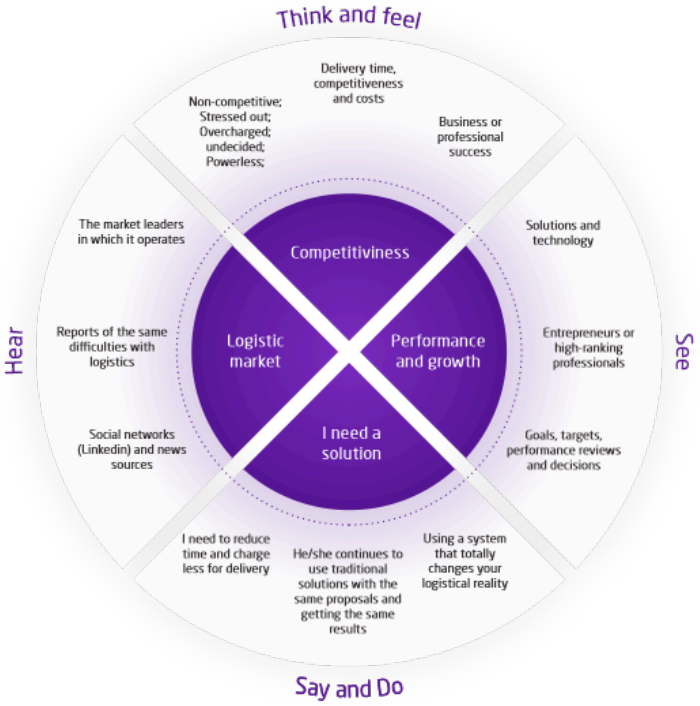

Persona 1
Customer

Age :
35 to 65

Occupation :
CEO, Business Owner, and Manager (Financial, Senior Supply Chain, Logistics, Transportation).

Motivation :
Implementing or improving product delivery or solving logistic issues.

Gain

Increased performance and positive reviews

To be a leader in its segment

Efficient and competitive product delivery

Pain

Losing clients due to logistical problems

Cancellation or loss of sales due to logistics

Non-competitive logistics

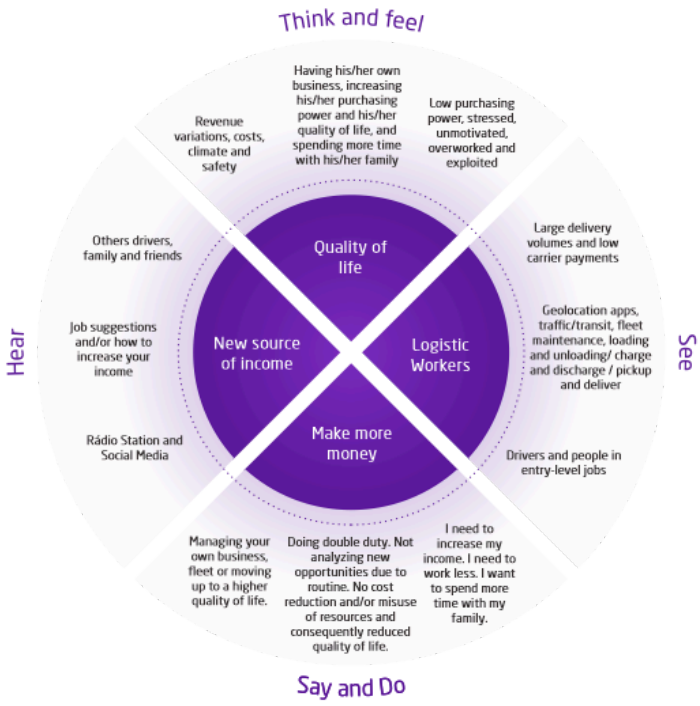

Persona 2
Driver

Age :
25 to 55

Occupation :
Driver (Professional, amateur), Entry-level worker.

Motivation :
Having a main flexible job or an extra job to complement their incomes.

Gain

To own a business; to be promoted

Better quality of life and increase buying power

Having a surprising income; Optimizing work

Pain

Not honoring financial commitments. See the family facing difficulties

Vehicle problems. Increase in operating costs. Suffer an accident at work

Work hard. be explored. Being underpaid. Low purchasing power Analyze new opportunities. Get out of the comfort zone. Optimize the way of using the income

7.0 Marketing Plan

By generating instructive and useful content for the user, we will seek to generate qualified leads and nurture them through various channels. Working on the SEO of each post to ensure gradual and increasing positioning on Google.

7.1 Channels

- Social Media / Website / Ads
- Company's success case (Word of mouth)
- Logistics Fairs

7.1.1 Website

Having our website as a main lead acquisition channel, our content is rich and informative. This content is prepared for all, including people with disabilities. We invest in important technologies to keep all of us together.

7.1.1.1 Accessibility for Ontarians with Disabilities Act (AODA)

The Accessibility for Ontarians with Disabilities Act (AODA) became law in 2005. This act makes Ontario the first province in Canada to have accessibility legislation. This act aims to make Ontario accessible for everyone by 2025.

7.1.2 Logistics Fairs

EventTrack research has shown that live experiences give 74% of attendees a more positive impression of your brand, and 87% of event attendees will eventually buy a brand's product after going to an event.

Events are the best tactic for generating qualified top-of-funnel leads out of all B2B tactics, according to DemandGen research.

8.0 Operational Plan

8.1 Departments

8.1.1 Logistics and Customer Care

Transport logistics is a branch of logistics that evaluates each delivery and determines which is the most economical, agile, and safe way to meet consumer demands. For this reason, it represents a very important link in the relationship between the company, the customer, and the entire supply chain.

For this to be accomplished, different issues that directly impact the performance of transport must be considered, such as:

- **Operational costs;**
- **Risks;**
- **Deadlines;**
- **Types of cargo;**
- **Types of products and its classification;**
- **Most suitable vehicle;**
- **Size of the Volume to be transported;**
- **Distance;**

- **Best route;**
- **Travel time;**

Our logistics department will incorporate the customer service department so that we can offer the best solution and specialized service, understanding the real need of each company served. With in-depth knowledge of logistics and our platform, the professionals in this department have the technical attributes necessary to suggest ideal actions and methods.

8.1.2 Technology

The technology department is responsible for preparing the infrastructure that receives all the work of the development team. It is also the team responsible for implementing the processes and monitoring the planning, based on agile methodology and best practices, as well, as maintaining the platform, applications, and systems presented in the **MVP** section. Our IT team seeks to implement the innovations necessary to meet the market's needs with cutting-edge technology and quality. It is also responsible for ensuring data security and privacy and providing the best experience for our users and customers.

8.1.3 Marketing

The marketing department's main task is to study the market and customers, in addition to developing strategies that effectively reach and make the brand relevant to these future customers, resulting in more sales.

Before the launch of MVP, this department aims to collect market data and potential early adopters, conducting research and preparing marketing materials such as websites, social networks, and campaigns (Ads). After the launch, among the main objectives are: measuring results and customer acquisition channels, exploring new channels, and evaluating and responding to reviews.

8.1.4 Human Resources

HR's primary role is to recruit, select, and align talent that matches the organization's culture and goals. In addition, through data analysis and with the help of management software, HR has become a key element in the development of human capital within the company.

Contracts with specialized companies will be used to manage the necessary professionals and talents. In this way, we can measure expenses with the department, activate it whenever necessary and receive professionals suitable for the role.

8.1.5 Sales

The sales department is responsible for coordinating all activities related to the sale of commercial software. It is from this sector that the company obtains profit and financial resources so that it can grow, evolve, and survive economically. It is directly responsible for billing, which means that its performance is linked to sales targets and, consequently, to the performance of all other departments.

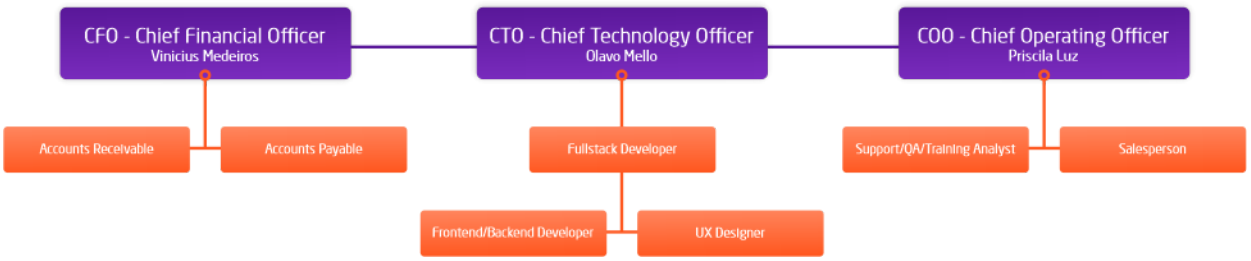

With training and specializations, the sales department has a deep knowledge of logistics processes. With technical qualification to assist and instruct the customer in the decision to use Bringfy solutions.

8.1.6 Accounting & Financing

Financial management is responsible for making the cash flow. It develops strategies to control the company's growth in a sustainable and safe way. It gives the manager tools to invest with a focus on success and planning, avoiding losses.

At the center of any organization, is responsible for ensuring the efficient financial management and financial controls necessary to support all business activities. Referring to the recording and analyzing of business activities, understanding where your incoming and outcoming cashflow will help you make better decisions moving forward to avoid failure.

8.2 Positions, Roles and Responsibilities

Vinicius Medeiros - CFO - Chief Financial Officer

Approval of payments, balance sheet, investment analysis, and approval, analysis reports for investors, department OKRs, and team management.

Accounts Receivable

Bank reconciliation, contract analysis, customer collection, and customer service.

Accounts Payable

Paying bills, paying taxes, paying suppliers, paying partners, paying employees, and contract analysis

Olavo Mello - CTO - Chief Technology Officer

A chief technology officer, also known as a chief technical officer or chief technologist, is an executive-level position in a company or other entity whose occupation is focused on the scientific and technological issues within an organization.

Full-stack Developer, Frontend Developer, Backend Develope,r and UX Designer

System development and maintenance team, responsible for implementing features and creating tools.

Priscila - COO - Chief Operating Officer

The chief operating officer (COO) is a senior executive tasked with overseeing the day-to-day administrative and operational functions of a business.

Training, QA, and Support Analyst

A training analyst is responsible for planning and monitoring training programs and activities according to business functions and requirements. Training analysts inspect the program materials, content delivery, and training schedules. Also, dive deep into a program to uncover bugs and issues, reporting to the IT department.

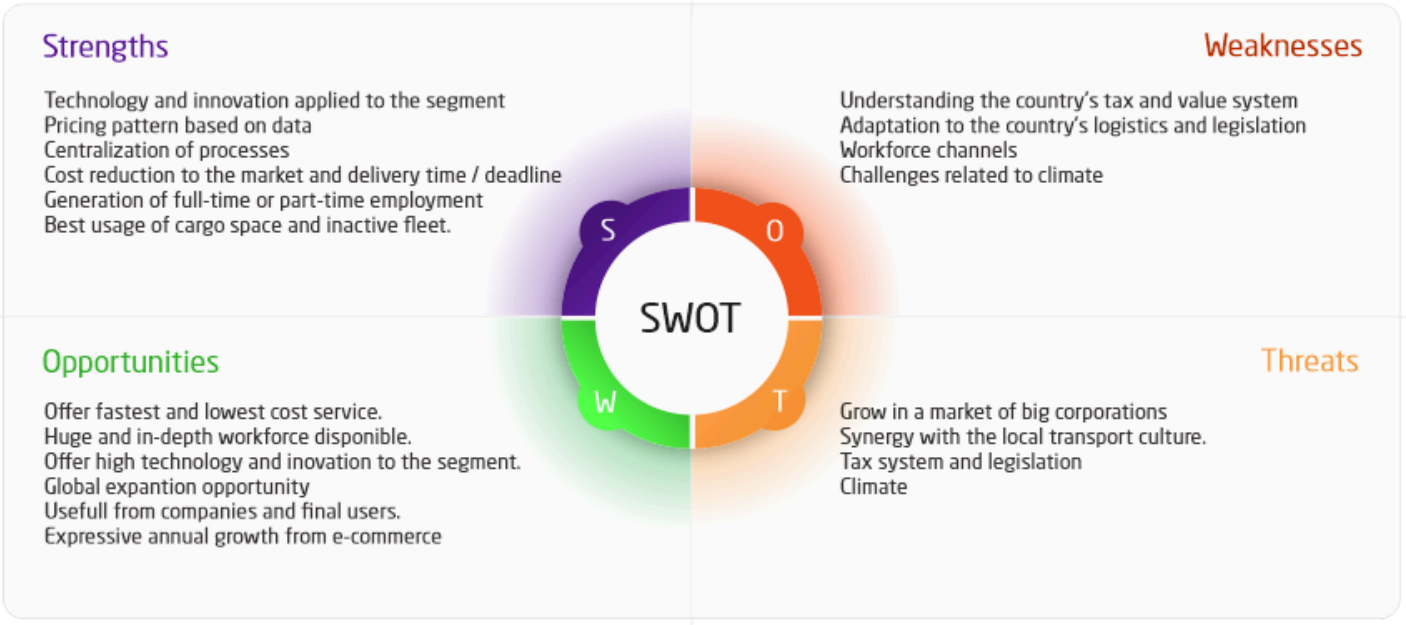

Salesperson

Ensures that the customer is getting what they need, in the right volume and at the right price. Further, a sales department promotes the growth of your business as well as customer retention. A quality salesperson builds an ongoing, long-term relationship with your customers.

9.0 SWOT

Our SWOT Analysis allowed us to understand the right strategic planning and strategic management techniques to be used. Knowing the Strengths, Weaknesses, Opportunities, and Threats related to business, we found real opportunities to solve customers' problems, to offer the best options to our partners, and show us clearly what we have and what we need to work on to improve.

Working on this, we were able to understand that the logistics market has a great segmentation, and almost all of them try to solve the problems of large companies. We also saw that we have to learn more about country laws, regulations, and climate challenges.

10.0 Target Market Segment Strategy

10.1 Target: Companies

Many companies from different segments and billings were identified with difficulties to manage their logistics (last mile) properly. Which ends up generating a loss of sales and customers, a low brand reputation, and little competitiveness compared to competitors. It was also understood that many logistics managers, directors, or business decision-makers end up looking for inefficient solutions. Speaking of small and medium businesses, which grow every day, the problem is even greater.

10.1.1 Competition

Bringfy is a company that manages the whole process of delivery, making life easy for the client, because the primary reason that companies will contract with a logistics service is to avoid needing to set up all of the stages on their own. This will take a lot of stress off of the client's shoulders and lead to a positive impact on sales in logistics.

Bringfy proves to be the ideal solution as it offers not only the possibility of competitiveness but also a professional delivery experience to the end customer and, to the retailer, the request and real-time monitoring of their deliveries. In addition, it is the

only company that offers price standardization using our delivery partners, guaranteeing competitive and automatically generated values based on data.

10.1.2 Strategy and Implementation Summary

Through scheduling online demonstrations, trade fairs, sponsored campaigns, inbound marketing, and instructional material on the website, blog, and social networks, Bringfy will be positioned as a last-mile reference, generating a channel of communication and nurturing qualified leads, our potential customers.

10.2 Target: Partners

We see the carrier as a fundamental part of the entire logistics process and a strong partner in our technoplogy solution, whether it is a self-employed professional or a registered worker in a company. We identified professionals who were dissatisfied with their earnings, overloaded with the workload, with no prospects for growth, and unmotivated. Bringfy aims to change this.

10.2.1 Competition

Bringfy intends to offer better remuneration through an on-demand work format, which allows the partner to manage their time and earnings, balancing their quality of life and purchasing power. We also offer the opportunity to work more efficiently, with transport that suits your load capacity, geo-location, and time availability.

10.2.2 Strategy and Implementation Summary

Through sponsored campaigns, inbound marketing, and instructional material on the website, blog, and social networks, Bringfy presents itself as an opportunity for new partners. It also explores job offer channels for drivers who own cargo vehicles, fleet companies, or delivery service providers, to try out the services of the platform.

10.3 Buying Patterns

Business owners often use technology to make their sales, offer delivery of products to their customers, seek to generate positive reviews, and always worry about the reputation and positioning of their brand.

Fleet managers are always looking to improve their product delivery or solve logistic issues.

11.0 Marketing Strategy

Bringfy will seek, through the sharing of content on the website, social networks and inbound Marketing, to generate identity recognition for the brand. Positioning itself as an expert in last-mile and logistics. All content will be prepared and SEO prepared so that the brand is always in the top positions of organic searches.

With sponsored campaigns aimed at specific audiences, we seek to generate traffic and qualified leads, in addition to attracting transporters interested in being part of our list of partners.

12.0 Sales Strategy

Bringfy divided the sales pipeline into its constituent stages: Lead Generation, Lead Scoring & Qualification, Assessment of Needs, Proposal / RFP, and Closing. The Lead Generation is a process that belongs to the marketing strategy. Bringfy makes sure the sales process is repeatable, measurable, and scalable, keeping its reps accountable and maximizing every opportunity.

12.1 Lead Scoring & Qualification

This stage is essential to separating the strong/hot opportunities from those that are either less likely to convert or a poor fit. A Review of the collected leads will be done to evaluate how they match up with the ideal customer profile, in order to score them.

After that, the top-rated leads will then be classified by BANT (budget, authority, needs, and timeline): Does the lead have the budget to buy, the authority to make a decision, a need for your service, and the intent to make a purchase soon?

12.2 Assessment of Needs

Bringfy reps must engage with customers to identify their needs and which logistics service will offer the best match. At this time, lead sales collateral specific to these services will also be offered to educate them about the offerings and answer any lingering questions about their options.

12.3 Proposal

Bringfy will use an intuitive and well-designed presentation, demonstrating to the customer that the platform is pioneering and essential, whatever the size of the business, as it was prepared to adapt to the customer's reality.

Through scheduling, the automation functions of the entire logistics process are demonstrated in practice, the applicability that will provide cost reduction, ease in managing deliveries, and practicality in decision making. With that, we direct the client to the closing of the contract or to the use of the trial period.

Depending on the size, scope, and nature of the contract or agreement, we may offer discounts, rate reductions, or other incentives to new customers.

12.4 Closing

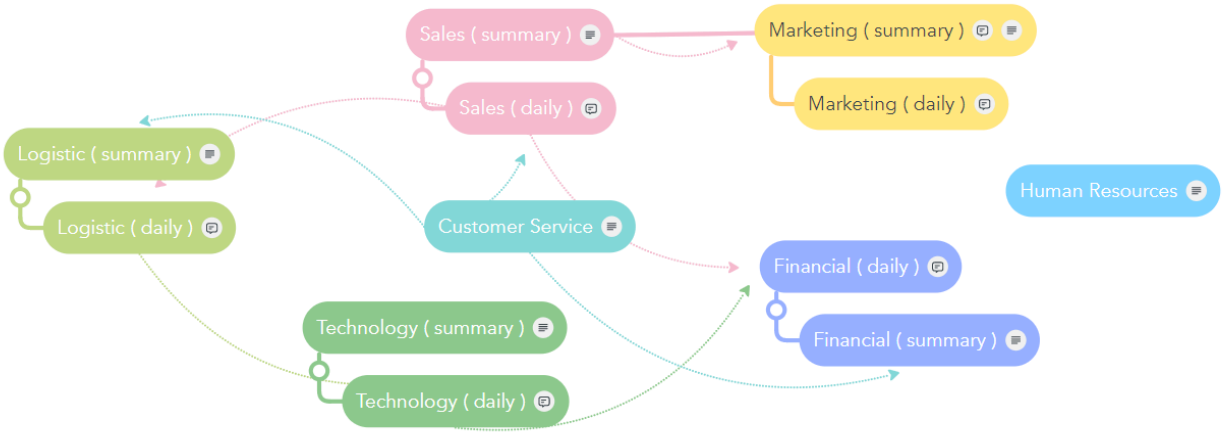

Once the contract is signed and the deal is closed, it’s time to make a smooth handoff to customer service and get to work fulfilling the terms of the agreement.

13.0 Competitors

We found some innovative companies that offer logistic solutions partially equal to ours. But we didn't find any company offering exactly the same solution and flexibility.

Company	Concept	Website	Strengths	Weaknesses
SHUDLE	Connect local drivers who can deliver large items	shudle.ca	Almost exactly the same we are offering	Apparently, having difficulties to find drivers (4 drivers signed). Just for large itens. Pre-lauch
GoBolt	In last-mile, deliver packages using electric vans.	gobolt.com	Strong brand, excellent reviews and strong structure; **Fast growing;**	Client should work with company fleet and don't have the option to use their own fleet; Expensive to small companies; Modest control panel;
TYLTGO	Provides merchant partners with a white-label same-day delivery service and the ability to customize their post-purchase delivery experience through custom delivery notifications and a custom-branded tracking page.	tyltgo.com	Good delivery options to same day and next day; A growing startup; Rises 2.3M of investment recently;	Client should work with company fleet and don't have the option to use their own fleet; Modest control panel; Startup launched in 2018;
onfleet	Specialized software to manage last-mile delivery. (outside Canada)	onfleet.com	Excellent control panel; Global company; Many success cases;	Cover only companies that have your own fleet;
shippie	Same-day delivery across the GTA!	shippie.ca	Same day. Easy e-commerce integration. Many little stores and shops;	A little own fleet covering a small ratio;
ShipBob	Omni fulfillment solution	shipbob.com	Complete solution and warehouse;	2-day shipping. Own fleet;
moveit	On-demand delivery & move	gomoveit.com	Schedule available; Online growing	US

14.0 Management Summary

Our management philosophy is based on responsibility and mutual respect, maintaining an environment that stimulates productivity and emphasizes respect for customers and fellow employees. The company structure is linear, which leads to staff responsibilities and decision-making power.

Customer Service

Customer Service is the distribution center of information between clients and us. New clients should be directed to sales and active clients should be directed to specific departments depending on the necessity.

Logistic

Responsible for picking up sales demand and making it possible within the entire logistical process to improve customer demand in the department, and also help other departments to solve problems and situations involving logistic questions.

Technology

Responsible for getting the information from the logistics department to apply or not to the solution or even pricing values for implementation, and also to maintain the system uptime, solve technical problems, keep data safe, and work on updates and new features.

Sales

Receives the leads from the Marketing department and serve the customer in specific demand, understanding needs, and investment values.

Marketing

Take care of Social media, evaluate, and respond to reviews and comments. Create relevant content for social networks, land pages, and websites, always observing the tone of voice to be used and thinking about the targets to which we will focus. Develop content always worrying about SEO, analyzing performance over time, and performing optimizations that repeat better placements for keywords of interest. Work on ads and evaluate performance with a focus on conversions and lead qualification.

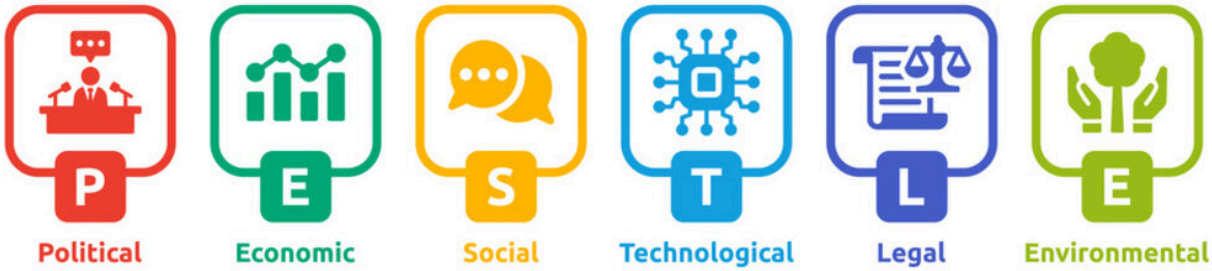

Financial

Check the demand for sales and technology, charge the specific sale and recurrent payments, and also guarantee the best usage of companies money, suggestion changes if needed.

Human Resources

HR's primary role is to recruit, select, and align talent that matches the organization's culture and goals. In addition, through data analysis and with the help of management software, HR has become a key element in the development of human capital within the company. Contracts with specialized companies will be used to manage the necessary professionals and talents. In this way, we can measure expenses with the department, activate it whenever necessary and receive professionals suitable for the role.

15.0 PESTLE Analysis

15.1 Political

Political factors have a great impact on the logistics industry. The developed economies are choosing to outsource their manufacturing operations to lesser developed countries to utilize cheap manpower. Hence, the operations of logistics are becoming more and more complex as a result of this outsourcing.

The products have to be delivered to the final location. Therefore, every company has to coordinate its logistics, hire drivers to create its own delivery team or find a third-party company to do it. In such scenarios, the political forces do not have much to do because investing to build infrastructure for shipping and transport will not solve the last-mile delivery problem.

The global crisis, caused by Covid-19 and the Ukraine War, has been a significant impact on the logistics industry, and the companies are directly affected. While people start to buy more online using delivery channels, on the other side we have companies trying to overcome the crisis and fighting for sales. Transport has become more extended and more expensive, and the policies shaped by the authorities are not very dynamic observing such huge changes. This is making an impact on economic conditions on a macro level.

Owing to such drastic economic instabilities, it is becoming difficult for consumers to spend as much as they can, thereby reducing their spending power. If they would not be able to spend, it would not be possible for the government bodies and people in the authorities to collect enough funds in the name of tax collection. This will limit the

domain of government in shaping the dynamics of the logistics industry as there won't be excessive funds to spend on the progress.

This further results in numerous missed opportunities which could have been availed if the logistics and transport system was efficient enough and had enough capacity.

15.2 Economical

The economic perspective in the logistics business is evolving at a very rapid pace. The gap between demand and supply is being filled by the logistics business. The growing population is exerting immense pressure, making it difficult for a logistics business to meet the demand with economical products. In addition to that, the availability of raw materials is becoming difficult to manage in times like these.

The market prices are also an important factor to consider. At times, it becomes difficult to consider options for logistics considering the peak pricing, the changes of fuel price, , national and regional policies, delivery demand, and also the monopoly of some logisticians that does not offer companies the economical option. This brings a lot of risks along which include operating risks, credit agreements, delivery contracts, completion risks, etc.

Owners and fleet managers have to continuously look for ways through which they can trim costs by utilizing lead time effectively.]

15.3 Social

Plenty of social factors affect and be affected by the logistics industry once they deliver every product to customers. The effectiveness and competitiveness can provide better prices and services, directly impacting incomes from families.

15.4 Technological

The logistics industry is undergoing a major transformation in this age of digital revolution. Placing online orders, handling and supervising, and keeping track of storage timings will become completely digitalized. The biggest example that we have seen in recent times is the way Amazon is utilizing Drone technology for efficient deliveries.

Technologies like robotics, self-driving vehicles, wearable gadgets, and the Internet of Things (IoT) are really transforming the dynamics of the logistics industry in recent times. The Internet of Things is becoming a new cool in the logistics domain. The way it connects every possible device to the internet is making it easier for the distributors and transporters to carry out their activities efficiently. The logistics industry is making extensive use of the template of IoT to incorporate necessary sensors to keep a check on the supply chain process as well as on the quality of packages.

The automation factor thereby increases the operational efficiency of the industry. This is becoming an easier way for all companies to gain competitive advantage and the last-mile delivery should support this high volume of packages to be delivered.

15.5 Legal

If you are not aware of the legal aspects of the region in which you will be operating, there is a possible chance of many hurdles that you will be facing as a result of this. The legal framework for logistics is a mandatory prerequisite to follow. Things like currency issues, corrupt practices, money laundering, risk management, security breach, compliance, accountability program, transaction activities, and trade policies are some of the sample areas about which you must gather your knowledge beforehand in order to avoid any possible violation of law.

There are several laws i.e. labor, manpower, working conditions, health and safety etc. that must be known in the logistic sector. Legal factors influence the cost and profitability of any business. The law and order policies of every region are quite dynamic and keep on changing frequently, hence knowing about the legal culture of the region for logistics is one of many crucial factors for success. A solution that covers all legal parameters reduces not only the business and the worker risk but also increases competitiveness and happiness respectively.

15.6 Environmental

From the environmental perspective, global warming and climate change is making it difficult to save our natural resources, which ends up in further crisis regarding the

unavailability of raw materials. Green logistics is grabbing much attention in the logistics domain of the business to promote low-carbon emission vehicles and minimal usage of energy.

Transport used in the logistics industry is making a negative influence on the environment; hence, logistics businesses have to take care of the green aspects of the business as well. Being a business that deals majorly in transport and movement of vehicles, it is becoming an important aspect for the logistics industry to adopt such practices which save the environment from any potential danger created by the consumption of fuels. Customers appreciate such practices adopted by the companies, which, in turn, helps them build a sustainable competitive advantage in the longer run.

Green logistics, also known as environmental logistics, refers to sustainable policies and measures focusing on lowering the impact logistics has on the environment. This includes the configuration of processes, structures, systems, and equipment used in the transportation, distribution, and warehousing of goods.

Transportation currently amounts to half the global consumption of oil and almost 20% the global consumption of energy and close to 40% is related to urban transportation. In fact, the International Energy Agency expects these numbers to double by 2050 mainly due to online shopping; therefore, the logistics industry must find a smarter and more innovative way to distribute merchandise while minding the balance between economic growth and the protection of natural resources.

As demonstrated, the efficiency of logistics has a huge impact on the environment.

16.0 Important factors for success

16.1 Efficient communication between drivers, clients, and bases

Like any other business, starting a logistics business takes a lot of effort in the beginning. The main objective is to have effective communication among drivers, clients, and bases. They are the key stakeholders in any kind of process. Listening to the client's needs and the driver's expectations will direct us to the right decisions.

Having a proper template for this sort of communication and using tools as surveys can be useful. Unless our bases and drivers are trained to coordinate, cooperate and integrate with each other, it would be difficult to achieve our objectives.

16.2 Quality, availability, and punctuality of services

Providing quality-oriented services is quite mandatory for any logistics business. In fact, logistics thrives on quality-based services ,which none of its competitors can match. Providing timely delivery to the customers will assure their confidence in the services and on the other hand, the companies and customers will rely more on the services, eventually changing into their long-term contractors.

16.3 Good relations with drivers and employees

Just like any other business, manpower plays an important role here. It is important to keep our drivers and other employees happy, so their potential can be fully utilized for the services. They must be kept motivated and should be encouraged frequently so they can feel honored to be a part of this business. It is not always about the money or extrinsic factors, you need to focus on the intrinsic factors as well. Unless they are intrinsically motivated, they will find no sense of purpose in what they are doing, and it would be all meaningless for them. This will eventually turn into a lack of productivity, thereby affecting the progress of our logistics process.

16.4 Suggesting, meditating, and customizing

For any service to be delivered in logistics, it is important to suggest an apt distribution strategy to our customers as well as drivers. Our clients will be interested in delivering value-oriented services to their end users, who will only be interested in getting their products or services timely delivered with good quality. Hence, it is our job to play an effective mediator between companies and drivers, suggesting and originating to achieve this objective. As a logistics partner, this puts us in a very tricky and sensitive position. Therefore, we have to provide an effective and efficient distribution strategy to our customers as well as drivers, customizing our solution and observing the real customer necessity and availability. The very basic idea behind any successful logistics business is to provide as much convenience as possible to both parties, companies, and drivers.

17.0 Donations Deliveries

Technology to streamline charitable giving and delivery services through its innovative platform. By providing a user-friendly interface for donors to list items and recipients to request deliveries, Bringfy simplifies the process of connecting those in need with those who wish to give. With a focus on convenience, transparency, and community building, Bringfy aims to revolutionize the way donations are made and received, ultimately making a positive impact on individuals and communities worldwide.

18.0 Sales Forecast

We expected revenue increases beginning in the fourth quarter of 1º year launch from aggressive advertising, as explained in the marketing strategy.

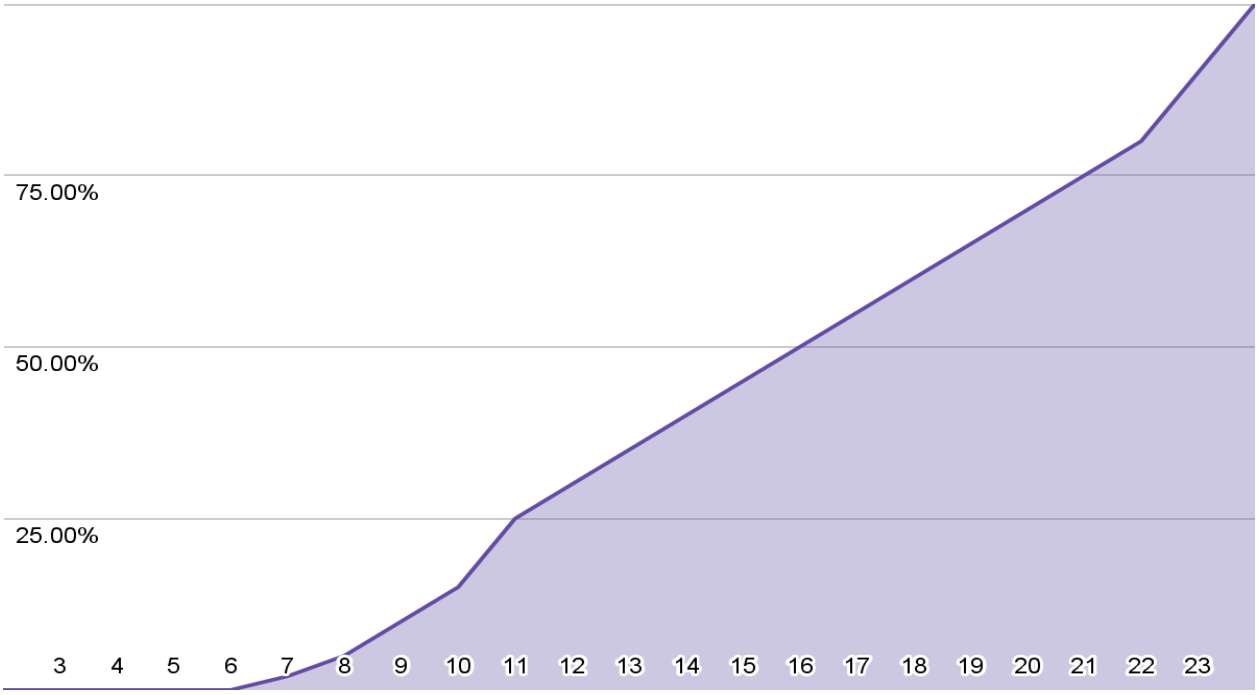

Table: Sales Forecast

Estimative	
Estimated delivery per month in the region	169,539
Monthly deliveries based on a market share of 10%	16,954
Daily deliveries based on a market share	565
Drivers needed	19
Deliveries per driver a day	30
Revenue / month	**$135,631**
Revenue / year	**$1,627,572**
Ticket	**$8**

19.0 Break-even Analysis
